

Japan Value Equity Green

July 2026

Strategy

Green Strategy invests in Japanese equities that meet environmental management and investment value criteria, and aims to achieve above-benchmark return in the mid- to long-term. We use a bottom-up approach. The Japanese equity research team analyzes intrinsic value of individual stocks and compares it with market price in order to identify undervalued stocks. Environmental research is conducted by Sompo Risk Management, a leading company in domestic ESG research.

Market Review

Despite tech names' underperformance due to fears of excessive investments in AI, other names supported the market. Amid the volatile market, the marine transportation and rubber sectors rose as the market responded positively to their high dividend yields. Meanwhile, the nonferrous metal and glass & ceramic sectors fell as they included AI and semiconductor-related names that had undergone a correction.

In the first part of the month, the Japanese market rose due to diminished expectations for early US rate hikes following the worse-than-expected US jobs data. The market was supported by the BoJ's Tankan survey, which indicated an improvement in domestic business sentiment. Subsequently, major Korean semiconductor names plummeted after the release of their financial results, and this selling spilled over into the domestic market. In the middle of the month, the market's upside was capped by remarks from Fed officials about possible rate hikes. Tech stocks experienced a selloff due to the market fears over the new generative AI model developed by a Chinese company and excessive investments in AI by the US tech giants. In the latter part of the month, the market bounced back, driven by solid earnings results in Japan and the US. As the month drew to a close, the market adopted a wait-and-see stance ahead of the monetary policy meetings in Japan and the US, ending the month below the mid-month high.

Composite Performance (%) Excess Return*

Benchmark	TOPIX Total Return**							
Inception Date	July 2006							
Number of Holdings	75							
Bloomberg Code	SNAMGRN							
Assets Under Management	Strategy Total		JPY 75.6B (USD 475M)					

* Excess return figures are annualized for three years and longer.

** TOPIX is a market benchmark with functionality as an investable index, covering an extensive proportion of the Japanese stock market. TOPIX is a free-float adjusted market capitalization-weighted index. TOPIX shows the measure of current market capitalization assuming that market capitalization as of the base date (January 4, 1968) is 100 points. This is a measure of the overall trend in the stock market, and is used as a benchmark for investment in Japan stocks. Dividends used in calculating the TOPIX Total Return Index are gross (i.e. before tax). Performance is net of fees.

The data shown is of a representative account. Past performance is not a guarantee of future returns.

This document has been prepared solely for informational purposes and does not constitute an offer to sell securities in any jurisdiction. Actual performance achieved by a client portfolio may be affected by a variety of factors, including the initial balance of the account, the timing and amount of any additions to or withdrawals from the portfolio, changes made to the account to reflect the specific investment needs or preferences of the client, duration and timing of participation as a client, and a client portfolio's risk tolerance, investment objectives and investment time horizon. The returns presented above are net of a model fee of 35bps, which is the highest fee charged to investors.

Attribution Analysis

Stock selection contributed to performance, while sector allocation detracted. In sector allocation, underweighting (UW) of Nonferrous and Appliances, and overweighting (OW) of Trans Equip contributed to performance, while UW of Wholesale and Insurance and OW of Chemicals detracted. In stock selection, UW of Tokyo Electron, Kioxia Holdings, and OW of Otsuka Corporation contributed to performance, while OW of Socionext and SUMCO, and UW of Hitachi detracted. Last month we increased holdings of Sumitomo Corporation, Socionext, and Sumitomo Metal Mining and decreased holdings of Kyocera, Taikisha, and Asahi Kasei.

Outlook

We expect the market to remain firm. Valuations (forward P/E), which reflect overall market expectations, are currently at a high level compared to historical averages, primarily driven by optimism surrounding AI and semiconductor names. This market optimism is likely to be sustained given the outlook for continued strong demand for semiconductors and AI-related investments. However, the market could experience short-term volatility due to uncertainty surrounding the monetization of AI investments. We expect the market to remain robust, led by an improvement in fundamentals, not limited to AI and semiconductor-related names. While FY26 earnings forecasts may see some impact from rising costs, stemming from the Middle East situation, the situation has eased more than initially anticipated. We should remain vigilant about a potential market correction, given that share prices have risen rapidly so far. That said, we don't expect a large market correction as there is strong equity demand from a high level of share buybacks and the BoJ has relatively accommodative monetary policy compared to the US and Europe.
