

Japan Value Equity Large Cap

January 2026

Strategy

Large Cap Strategy is a focused, Japanese large/mid-cap equity strategy that aims for above-benchmark return in the mid- to long-term. The portfolio managers build the portfolio by investing in undervalued stocks with careful consideration of risk/return. A bottom-up approach is used. The Japanese equity research team analyzes the intrinsic value of individual stocks and compares it with market price to identify undervalued stocks. The portfolio is not constrained by sector weights.

Market Review

Expectations for aggressive fiscal policy pushed the market up following reports of a snap general election. The non-ferrous and oil & coal products sectors rose on heightened expectations for earnings improvements following the increase in commodity prices. The services and information & communication sectors fell because of their high percentage of growth stocks when interest rate increases were creating headwinds.

The Japanese equity market rose in the first part of the month because of expectations for expansionary fiscal policy driven by the outlook that the Takaichi administration would call a snap general election. Share prices then fell in the middle of the month despite prospects for an LDP majority as long-term interest rates rose rapidly on alarm over fiscal expansion and oversupply of super-longes as well as tensions between Europe and the US concerning Greenland. The market fell further in the latter part of the month despite brief rises as JPY appreciated against USD on heightened concerns of currency intervention from Japanese and US authorities. Share prices then saw upside resistance through the end of the month as investors held off in the run-up to earnings season for both Japan and the US.

Composite Performance (%) Excess Return*

Bloomberg Code	SNAMLGC		
Assets Under Management	Composite (T9893)	JPY 119.6B	(USD 775M)

* Excess return figures are annualized for three years and longer.

** The Russell/Nomura Large Cap Value Index is the value investment style index of the Russell/Nomura Large Cap Index, which includes both value and growth investment styles. The Russell/Nomura Large Cap Index covers large cap stocks listed on Japanese stock exchanges, and this index contains the top 85% of the Russell/Nomura Total Market Index in terms of adjusted market capitalization. Value indexes are indexes made up of stocks with low adjusted Price Book-value Ratios and growth indexes are those made up of stocks with high adjusted Price Book-value Ratios, after determining style probability based on adjusted P/B.

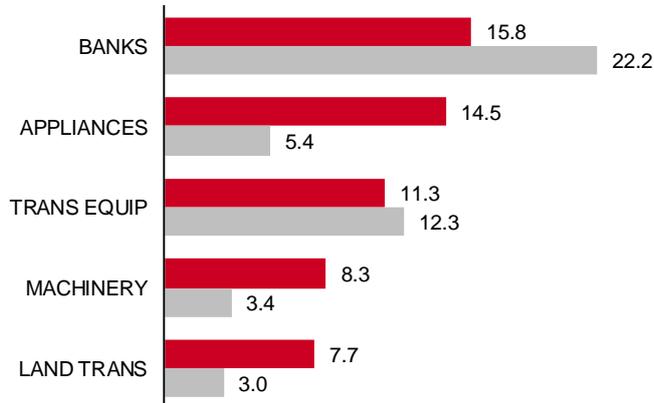

*** TOPIX is a market benchmark with functionality as an investable index, covering an extensive proportion of the Japanese stock market. TOPIX is a free-float adjusted market capitalization-weighted index. TOPIX shows the measure of current market capitalization assuming that market capitalization as of the base date (January 4, 1968) is 100 points. This is a measure of the overall trend in the stock market, and is used as a benchmark for investment in Japan stocks. Performance is net of fees.

Attribution Analysis

Sector allocation detracted from performance while stock selection contributed. In sector allocation, overweighting (OW) of Nonferrous and underweighting (UW) of Insurance and Elec Power & Gas contributed to performance, while UW of Wholesale and OW of Land Trans and Foods detracted. In stock selection, OW of Sumitomo Metal Mining, Mitsui Chemicals, and Japan Post Bank contributed to performance, while OW of Taiyo Yuden and Yamato Holdings and UW of Mizuho Financial Group detracted. Last month we increased holdings of Daikin, Toyota Motor, and Tohoku Electric Power and decreased holdings of Sumitomo Metal Mining, NSK, and Japan Post Bank.

Outlook

We expect the market to fluctuate. Corporate earnings forecasts have been rising since Japan and the US came to agreement on trade talks and it looks highly likely that earnings will continue to rise in the coming fiscal year as well. However, we believe caution is needed over the near term as valuations (forward P/E, etc) are already at historical highs, driven by strong corporate earnings, prospects for a stable political situation following the general election, and expectations for increased investment in AI globally. That said, we believe market downside will be limited as there is strong equity demand from a high level of large-scale share buybacks and the BoJ has relatively accommodative monetary policy compared to the US and Europe.
