

Japan Value Equity Small Cap

May 2026

Strategy

Small Cap Strategy invests in Japanese small cap equities and aims to achieve above-benchmark return in the mid-to long-term. The portfolio manager builds a portfolio by investing in undervalued stocks with careful consideration of risk/return. A bottom-up approach is used. The Japanese equity research team analyzes intrinsic value of individual stocks and compares it with market price in order to identify undervalued stocks. The portfolio is not constrained by sector weights.

Market Review

The market rose, driven by generative AI-related stocks amid hopes for an end to the conflict between the US and Iran. The services and metal products sectors rose on solid earnings results. Meanwhile, the mining sector fell on reduced expectations for earnings growth, stemming from a decline in crude oil prices. Real estate also declined on fears that a rise in domestic long-term interest rates would act as a headwind for its earnings.

In the first part of the month, the Japanese market saw a slight gain as expectations for currency intervention by the Japanese government and BoJ capped its upside. The market then rose, buoyed by better-than-expected US jobs data and growth in US tech stocks, following strong earnings reports from US semiconductor companies. In the middle of the month, the market faced upside resistance due to a rise in long-term rates in both Japan and the US. Additionally, generative AI-related names saw selling pressure after earnings guidance from some electrical wire companies missed market consensus. In the latter part of the month, fears over geopolitical risks eased after Trump indicated progress in negotiations between the US and Iran. The market finished May higher, driven by tech companies following media reports of a US generative AI firm preparing for an IPO.

** Russell/Nomura Small Cap Index covers small cap stocks listed on Japanese stock exchanges. This index contains the bottom 15% of the Russell/Nomura Total Market Index in terms of adjusted market capitalization.

*** TOPIX is a market benchmark with functionality as an investable index, covering an extensive proportion of the Japanese stock market. TOPIX is a free-float adjusted market capitalization-weighted index. TOPIX shows the measure of current market capitalization assuming that market capitalization as of the base date (January 4, 1968) is 100 points. This is a measure of the overall trend in the stock market, and is used as a benchmark for investment in Japan stocks.

Attribution Analysis

Both sector allocation and stock selection contributed to performance. In sector allocation, overweighting (OW) of Appliances and Chemicals and underweighting (UW) of Construction contributed to performance, while OW of Services, Retail, and Pharms detracted. In stock selection, OW of Nichicon, Kakaku.com, PALTAC contributed to performance, while OW of Sawai Group Holdings, Izumi, and Bellssystem24 Holdings detracted. Last month we increased holdings of Sawai Group Holdings, Keisei Electric Railway, Mitsui High-tec and decreased holdings of OSG, PALTAC, and Nichicon.

Outlook

We expect the market will face gradually heavier upside resistance going forward. We believe that earnings forecasts for FY26 will remain robust, particularly for AI and semiconductor companies, which are expected to show high growth on the back of aggressive AI-related investments, despite likely cost increases stemming from the Middle East situation. Meanwhile, valuation (forward P/E) has reached a historical high, primarily driven by some AI and semiconductor names amid lingering uncertainty in the Middle East. While the market will be supported as there is strong equity demand from a high level of share buybacks and the BoJ has relatively accommodative monetary policy compared to the US and Europe, it has already priced in expectations for AI and semiconductor names to a large extent. Therefore, further increases in market expectations are unlikely.
